### Biometrics

[About Biometrics](#)[Products](#)[Hotel Locking](#)[Integrated Security Solutions](#)[Performance Doorsets](#)[Portable Security](#)[Service](#)[Workforce Productivity](#)

Ingersoll Rand Security Technologies is the first biometric manufacturer to offer the two most widely used biometric technologies - hand geometry and fingerprint.

The need to identify people is as old as humankind. People recognise each other by sight and sound. However, in today's complex society, it's impossible to personally know everyone and as a consequence, systems rely on recognising a credential rather than the individual. Our biometric readers recognise people, not credentials.

As a multi-technology company, we are uniquely qualified as a consultant to help our customers apply the right technology to their application.
